VIRGIN ISLANDS OF THE UNITED STATES

MUNICIPALITIES AND CITIES

POPULATION AND HOUSING

INTRODUCTION

General.—This bulletin for the Virgin Islands of the United States presents both population and housing data under classifications corresponding in general to those embodied in the second series State bulletins for Population and Housing. The characteristics of the population for which data are presented include sex, age, race, nativity, citizenship, marital status, school attendance, illiteracy, employment status, class of worker, occupation, and industry. In the housing tables are presented statistics on occupancy and tenure of dwelling units, value or monthly rent, size of household and race of occupants, type of structure, state of repair, number of rooms, persons per room, and such housing facilities and equipment as water supply, toilet facilities, bathing equipment, lighting, refrigeration, and radio. The total population of the Virgin Islands and of all their political subdivisions was presented in an earlier Population bulletin, entitled "Number of Inhabitants" and containing figures also for American Samoa, Guam, and the Panama Canal

Zone. The present bulletin includes all of the statistics for population characteristics and for housing that are to be published on the basis of the Sixteenth Decennial Census taken as of April 1, 1940.

The population data are presented in tables 1 to 12 and the housing data in tables 13 to 22. The amount of detail presented is generally greater for the larger areas than for the smaller ones. Available data from earlier censuses are presented only for the Virgin Islands as a whole.

Urban and rural areas.—The urban population of the Virgin Islands consists of those persons living in the three cities of Charlotte Amalie, Christiansted, and Frederiksted, the remainder of the population being classified as rural. (Frederiksted, which had a population of 2,498 in 1940, fell slightly below the limit of 2,500 set for urban classification in continental United States but was nevertheless continued as an urban place.)

POPULATION TERMS

Sex and race.—Because of the importance of the classification of the population by sex, practically all of the data in this bulletin are presented separately for males and females. Three major race classifications are distinguished in the tabulations, namely, white, Negro, and "mixed and other races," the last comprising persons of mixed white and Negro blood and the small number of persons of other races (only 40 in 1930), including Chinese, Filipino, Hindu, Indian, etc.

Nativity.—In the classification by nativity, a person born in continental United States or in any of its territories or possessions is counted as native. Likewise included as native are the small number of persons who, although born in a foreign country or at sea, were American citizens by birth because their parents were American citizens. All persons born in foreign countries, except those whose parents were American citizens, are classified as foreign born. Data for the foreign born are shown by country of birth.

Age.—The age classification is based on the age of the person at his last birthday before the date of the census, that is, the age of the person in completed years.

Citizenship.—The classification of the foreign born by citizenship comprises two main groups, naturalized and alien; the second group is further subdivided into those having first papers (that is, those who have made formal declaration of intention to become citizens of the United States) and those having no papers. In addition, there is a third group made up of foreign-born persons for whom no report on citizenship was obtained. Since it is likely that most of these persons are aliens, they are often included with the aliens in summary figures for citizens and non-citizens. The entire population 21 years old and over is also given by citizenship (all native persons being citizens) in order to show the number of potential voters.

Marital status.—The census classification with respect to marital status for the Virgin Islands covers five classes, namely, single, married, consensually married (living together as husband and wife by mutual consent), widowed, and divorced. Data on marital status are shown in detail by age.

School attendance.—The school attendance tabulation for 1940 is based on the replies to the enumerator's inquiry as to whether the person had attended, or been enrolled in, any regular school or college between March 1 and April 1, 1940. Night schools or vocational schools were not included unless they were a part of the regular school system; and no correspondence schools were included. The school attendance question in the census of 1930 applied to a somewhat longer period, namely, the seven months between the preceding September 1 and the census date (April 1).

Illiteracy.—The census defines as illiterate any person 10 years old and over who is not able to read and write either in English or in some other language. No specific test was prescribed, but the enumerators were instructed not to return any person as able to read and write (which ability would classify the person as literate) simply because he could write his own name. Data on illiteracy are shown in detail by age.

Employment status.—The classification by employment status in the 1940 Census of Population refers to the activity during the week of March 24 to 30, 1940, of all persons 14 years old and over. Two principal groups are distinguished: (a) Persons in the labor force, including those at work, those with a job but temporarily absent from work, those on public emergency work, and those seeking work; and (b) persons not in the labor force. The latter group includes persons reported as engaged in own home housework; those in school; those unable to work; all inmates of penal and mental institutions and homes for the aged, infirm, and needy, regardless of their activity during the census week; others not at work and not having a job, not on public emergency work, and not seeking work; and persons for whom employment status was not reported.

The categories of persons in the labor force are defined more precisely below:

Employed (except on public emergency work). The group classified as employed includes persons who worked for pay or profit at any time during the week of March 24 to 30, 1940, in private work or nonemergency Federal or local government work, or assisted without pay on a family farm or in a family business;

and persons not actually at work and not seeking work during the week of March 24 to 30, 1940, but with jobs, businesses, or professional enterprises from which they were temporarily absent because of vacation, illness, industrial dispute, or lay-off not exceeding 4 weeks with definite instructions to return to work on a specific date. The group "Employed (except on public emergency work)" includes not only employees but also proprietors, farmers, other self-employed persons, and unpaid family workers.

On public emergency work. This category includes persons who, during the week of March 24 to 30, 1940, were at work on or assigned to public emergency work projects conducted by the Work Projects Administration (WPA) or the Civilian Conservation Corps (CCC).

Seeking work. This category represents persons without work of any sort in the week of March 24 to 30, 1940, who were actively seeking work during that week. The group seeking work was subdivided into experienced workers and new workers, the latter being persons who had not previously worked full time for 1 month or more. Persons seeking work for whom a report on work experience was lacking were classified as experienced workers.

Number of unemployed.—The number of unemployed during the census week can be obtained by adding to the census figures for persons seeking work the number of persons on pay rolls of

the Federal emergency work agencies at the time of the census. This process yields a total of 3,071 unemployed persons.

Comparisons with earlier censuses.—The 1940 data on the labor force are not directly comparable with the statistics of gainful workers presented in the census reports for 1930 because of differences in definition. "Gainful workers" were persons reported as having a gainful occupation, that is, an occupation in which they earned money or a money equivalent, or in which they assisted in the production of marketable goods, regardless of whether they were working or seeking work at the time of the census.

Occupation statistics.—The occupation statistics in this bulletin are limited to employed persons (except on public emergency work) and are presented in terms of 12 major occupation groupings of the 451 titles in the complete 1940 census classification.

Industry statistics.—The industry statistics in this bulletin are limited to employed persons (except on public emergency work) and are shown in terms of a condensed list of 28 industry groups which represent selections and combinations of the 132 titles in the complete 1940 census classification.

HOUSING TERMS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house, an apartment in a larger building, or a room in a structure primarily devoted to business or other nonresidential purposes. It may even be a boat or tent, if occupied by persons having no other place of residence.

Population per occupied unit.—Since the number of "occupied dwelling units" in 1940 is roughly comparable with the number of "private families" or "homes" in 1930, the population per occupied unit in 1940 may be compared with the population per private family in 1930 to indicate changes in family size.

Tenure.—Dwelling units are first classified as occupied and vacant, and the occupied units are then classified by tenure as owner-occupied and tenant-occupied. A dwelling unit is classified as owner-occupied if it was owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied even though cash rent was not actually paid for the living quarters. Rent-free quarters and living accommodations which were received in payment for services performed are thus included with the tenant-occupied units.

Type of structure.—Statistics are presented for dwelling units classified according to the type of structure in which they are located. A one-family structure is one which contains only one dwelling unit. It may have open space on all four sides or it may be one unit in a "row" of three or more houses built one against the other but with separate and independent entrances. A two-family structure is one containing two dwelling units, either side by side or one above the other. Separate figures are shown for dwelling units in structures containing one, two, or three and four dwelling units without business, and for all units in structures with business containing one to four dwelling units. The larger structures are classified according to number of dwelling units without regard to whether or not there was space for business in the same structure. "Other dwelling places," such as boats or tents, were enumerated only when occupied by persons having no other place of residence.

State of repair.—Instructions to enumerators specified that a structure was to be reported as needing major repairs when parts of the structure, such as floors, roof, walls, or foundations, required repairs or replacements, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence.

Water supply.—The three classifications under this heading include running water inside the dwelling unit, running water outside the dwelling unit, and "Other," this last classification including wells, springs, or cisterns.

Toilet facilities.—The first item in this classification is a flush toilet (with running water) inside the dwelling unit. The second, designated "Other toilet or privy," includes all other facilities, such as nonflush toilets in the dwelling unit and all outside toilets or privies.

Bathing facilities.—A dwelling unit is reported as having a bathtub or shower if either type of equipment, supplied with running water (not necessarily hot water), is available for the use of the household.

Number of rooms.—All rooms that are used or available for use as living quarters for the household are counted in determining the number of rooms in the dwelling unit. Bathrooms, closets, pantries, halls, or screened porches are not counted as rooms.

Lighting equipment.—Electric lighting includes lights that are wired to a power line or a home plant, even though service may be temporarily suspended.

Size of household.—All persons enumerated in the population census as members of the household (including lodgers, servants, and other unrelated persons having no other usual place of residence) are counted in determining the number of persons who occupy each dwelling unit.

Radio.—A dwelling unit was enumerated as having a radio if it contained a usable radio set or one only temporarily out of repair.

Refrigeration.—A dwelling unit was classified as having a refrigerator if there was either a mechanical refrigerator or a refrigerator box or chest cooled by ice.

Persons per room.—The number of persons per room, used as an index of crowding, was obtained by dividing the number of persons in the household by the number of rooms in the dwelling unit. This figure was computed for each occupied dwelling unit.

Value and monthly rent.—The enumerator was instructed to obtain for each owner-occupied dwelling unit the estimated current market value of the home; for each tenant-occupied dwelling unit the monthly contract rent, or if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; and for each vacant dwelling unit the rent asked or the estimated rental value.

Medians.—The median value of the dwelling units in a given area is the value of the dwelling unit which would stand in the middle of the series if the units reporting value were arranged in order according to value; in other words, it is the value which divides the series into two equal parts, one having values higher than the median and the other having values lower than the median. The median rent may be defined in a similar manner.

In computing the median size of household it is necessary to assume a continuous distribution within each size group. For example, when the median is in the three-person group, the lower and upper limits of the group are assumed to be two and one-half and three and one-half, respectively. A similar method was used in computing the median number of rooms.
